4 - CHARACTERISTICS OF DEVELOPMENT

ALWAYS DEPRESS THE CLEAR TABLE BUTTON FIRST. You then have two options for entering information about the scheme: EITHER enter information for up to 20 dwelling types—each row must be either fully complete or left blank (enter 1 if information not relevant e.g. size of affordable unit but is a market unit)—OR select the default mix by depressing the "Use Default Mix" button.

Build costs in the toolkit are driven by the square meterage entered on this page. For houses the unit size will normally be the same for both gross and nett internal area. For flats you will need to increase unit sizes to take into account communal areas such as hallways, landings and stairs. Each scheme is different, and site-specific information should be sought. Where no information on sq meterage of communal areas is available the following factors can be applied: +15% for 1-5 storeys, +20% for 6-15 storeys, and +25% for 16 or more storeys.

If you are using a default mix then you can distribute units across the tenures by percentage; enter the percentage of units to assign to each tenure in the top row. The percentages are applied equally across all unit types.
 If you are not using a default mix then you may either enter units by percentage or by the exact number of units of each type for each tenure; in the table enter the exact number of units of each type for each tenure in the table.
 Whichever method is selected, ensure that relevant information is entered in the boxes at the bottom of the table.
